## Operations Research

Time : 3 Hours]
[Max. Marks : 100

1. Answer any two :
$10+10=20$
(a) Explain :
(i) Basic Variable
(ii) Feasible Solution
(iii) Unbounded Solution
(iv) Multiple Optimal Solution
(v) Artificial Variable
(b) A finished product requires two raw material A and B. Per unit cost of A is ₹ 10 and $B$ is ₹ 12 . At least 14 units of $B$ must be used and not more than 20 units of $A$ must be used. Each unit of A and B weigh 5 and 10 grams respectively. The finished product must weigh exactly 150 grams. How much of each type of raw material should be used for each unit of final product in order to minimize the cost. Formulate it as an LPP and solve it graphically.
(c) Solve the LPP

Maximize $\mathrm{Z}=3 x_{1}+5 x_{2}$
Subject to $\quad x_{1}+x_{2} \leq 4$

$$
3 x_{1}+2 x_{2} \leq 18
$$

$$
x_{1}, x_{2} \geq 0
$$

If a new variable is included in the above LPP with a profit of ₹ 7 per unit and 2 and 4 are the co-efficients of the first and second constraint respectively. Find the solution of the new problem.
2. Answer any two :
(a) Find the optimum integer solution to the following LPP :

Maximize $\mathrm{Z}=x_{1}+2 x_{2}$
Subject to

$$
2 x_{2} \leq 7
$$

$$
x_{1}+x_{2} \leq 7
$$

$$
2 x_{1} \leq 11
$$

$x_{1}, x_{2} \geq 0$ and integers
P.T.O.
(b) Four new machines $M_{1}, M_{2}, M_{3}$ and $M_{4}$ are to be installed. There are five places A, B, C, D and E. Cost of installation of the machines at different places are given below. Find the optimum assignment schedule.

| Places $\rightarrow$ <br> Machine <br> $\downarrow$ <br>  <br> A | B | C | D | E |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{M}_{1}$ | 4 | 3 | 6 | 2 | 7 |
| $\mathrm{M}_{2}$ | 10 | 12 | 11 | 14 | 16 |
| $\mathrm{M}_{3}$ | 4 | 3 | 2 | 1 | 5 |
| $\mathrm{M}_{4}$ | 8 | 7 | 6 | 9 | 6 |

(c) A product is produced at four factories A, B, C and D. The unit production cost in them are ₹ 3 , ₹ 4 , ₹ 1 and ₹ 6 respectively. Their production capacities are $A \rightarrow 50$ units, $\mathrm{B} \rightarrow 70$ units, $\mathrm{C} \rightarrow 30$ units and $\mathrm{D} \rightarrow 50$ units. These factories supply the product to four stores, demand of which are 25, 35, 120 and 20 units respectively. Unit transportation cost in rupees from each factory to each store is given below. Find the optimal allocation from factories to the stores.

## Store

| Factories |  | 1 | 2 | 3 | 4 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | A | 5 | 17 | 13 | 15 |
|  | B | 1 | 11 | 9 | 16 |
|  | C | 9 | 24 | 19 | 21 |
|  | D | 6 | 18 | 9 | 15 |

3. Answer any two :
$10+10=20$
(a) Goods truck arrives randomly at a stockyard with a mean of 8 trucks per hour. Trucks waiting in queue to be unloaded are paid a waiting charge at the rate of ₹ 60 per hour. A crew of four operatives can unload a truck in 6 minutes. Operatives are paid a wage rate of ₹ 20 per hour. It is possible to augment the crew strength to 2 or 3 (of four operatives per crew) when the unloading time will be 4 minutes or 3 minutes respectively per truck. Find the optimal crew size.
(b) The demand rate for an item in a company is 18000 units per year. The company can produce at the rate of 3000 per month. The set up cost is ₹ 500 per order and the holding cost is ₹ 0.15 per unit per month.
Calculate :
(i) Optimum manufacturing quantity
(ii) The maximum inventory
(iii) Time between orders
(c) A wholesaler dealing in stationery items wants to determine the order size for desk calendars. The demand and lead time are probabilistic and their distribution are given below :
Demand/week
(thousand)
Probability
$0 \quad 0.2$
$1 \quad 0.4$
20.3
30.1

| Lead time <br> (weeks) | Probability |
| :---: | :---: |
| 2 | 0.3 |
| 3 | 0.4 |
| 4 | 0.3 |

The cost of placing an order is ₹ 50 per order and the holding cost of 1000 calendar is ₹ 2 per week. The shortage cost is ₹ 10 per thousand. An order is placed when inventory level is less than or equal to 2000. Quantity ordered is equal to the difference between the current inventory and maximum replenishment level of 4000 units.
Simulate the system for 20 weeks :
(i) beginning inventory $=3000$ units
(ii) no back order policy
(iii) each order is placed at the beginning of the week
(iv) replenishment orders are received at the beginning of the week.

Random Number for Demand : 31, 70, 53, 86, 32, 78, 26, 64, 45, 12, 99, 52, 43, 84, 38, 40, 19, 87, 83, 73
Random Number for lead time : 29, 83, 58, 41, 13, 65, 82, 15
Find the total inventory cost.
4. Answer any two :
$\mathbf{1 0}+\mathbf{1 0}=\mathbf{2 0}$
(a) There are five jobs which is to be processed through two machines $\mathrm{M}_{1}$ and $\mathrm{M}_{2}$ in the order $\mathrm{M}_{1}$ then $\mathrm{M}_{2}$. Processing time in hours are as follows :

| Job | 1 | 2 | 3 | 4 | 5 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Machine $\mathbf{M}_{\mathbf{1}}$ | 3 | 8 | 5 | 7 | 4 |
| Machine $\mathbf{M}_{\mathbf{2}}$ | 4 | 10 | 6 | 5 | 8 |

Determine the optimal sequence for the five jobs, total elapsed time and machine waiting time.
(b) A project schedule has the following characteristics :

Activity Time (days)
1-2 4
$1-3 \quad 1$
2-4 1
3-4 $\quad 1$
3-5 6
4-9 5
5-6 4
5-7 8
6-8 $\quad 1$
7-8 $\quad 2$
8-10 5
9-10 7
Construct the network diagram. Find critical path and total project duration.
(c) A bought a car that costs ₹ $1,20,000$. The resale value of the car at the end of the year is $85 \%$ of the previous year. Maintenance and operation cost during the first year is ₹ 20,000 and increase by $15 \%$ every year. The minimum resale value of the car is ₹ 40,000 when the car should be replaced?
5. Answer any two :
$10+10=20$
(a) Solve the following game problem. The pay off matrix for player A is given :

## Player B

|  |  | I | II | III | IV |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | I | 6 | 4 | 8 | 0 |
| Player A | II | 6 | 8 | 4 | 8 |
|  | III | 8 | 4 | 8 | 0 |
|  | IV | 0 | 8 | 0 | 16 |

(b) Obtain the least square regression equation of Y on X from the following data :

| X | $:$ | 89 | 86 | 74 | 65 | 64 | 63 | 66 | 67 | 72 | 79 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Y | $:$ | 92 | 91 | 84 | 75 | 73 | 72 | 71 | 75 | 78 | 84 |

Forecast the value of Y when $\mathrm{X}=70$
(c) A gambler at a horse race is considering placing bet on a specific horse. There are four possible alternatives and states of nature with the following pay off :

| $\quad$ Strategy | A wins | B wins | C wins | All lose |
| :--- | :---: | :---: | :---: | :---: |
| Bet A | 7 | -2 | -2 | -2 |
| Bet B | 3 | 3 | -2 | -2 |
| Bet C | 2 | 2 | 2 | -2 |
| Do not bet | 0 | 0 | 0 | 0 |

Determine the strategy as per
(i) Maximin Criteria
(ii) Savage Regret Criteria
(iii) Hunwicz Criteria
