

Seat No. : _____

LD-109

April-2014

B.Sc. Sem.-VI

Microbiology : (CC-307)

(Genetic Engineering & Biotechnology)

Time : 3 Hours]

[Max. Marks : 70

1. Answer the following : (any **two**) **14**
 - (a) What are restriction endonucleases ? Discuss their types and nomenclature.
 - (b) What is the role of a vector in genetic engineering ? Enlist different vectors and describe cosmid.
 - (c) Discuss site directed mutagenesis and give its importance.
 - (d) Describe use of Polymerase Chain Reaction as a tool for genetic engineering.

2. Describe the following : (any **two**) **14**
 - (a) Preparation of cDNA.
 - (b) Techniques for joining of vector and DNA.
 - (c) Use of nucleic acid probes as a method for screening of cloned cells.
 - (d) Methods for cell transformation in eukaryotic host cells.

3. Discuss principles and applications of following techniques : (any **two**) **14**
 - (a) Plant tissue culture
 - (b) Electrophoresis
 - (c) DNA Microarray
 - (d) RIA and RAST

4. Describe the following : (any **two**) **14**
 - (a) Analytical uses of enzymes
 - (b) Traits of genetically modified plants.
 - (c) Role of microorganisms in bioleaching.
 - (d) Biopesticides

5. Answer the following very briefly :

14

- (a) Give function of polynucleotide kinase.
 - (b) Name the λ phage vectors.
 - (c) Give two limitations of plasmid as vector.
 - (d) Name the recognition site of EcoR I and its products.
 - (e) What are marker genes ?
 - (f) What is genomic library ?
 - (g) Name the biomolecules separated during Southern, Northern and Western blotting techniques.
 - (h) What is the X gal dye ?
 - (i) Give examples of enzymes used for therapeutic purposes.
 - (j) Give advantages of using serum as media ingredient for animal cell culture.
 - (k) What is Rf value ?
 - (l) What is IPR ?
 - (m) Name the microorganism used for MEOR.
 - (n) Enlist the marketed bio-fuels.
-
