

**ND-102**  
**December-2015**  
**B.Sc., Sem.-V**  
**Core Course-303 : Mathematics**  
**(Complex Variables and Fourier Series)**

Time : 3 Hours]

[Max. Marks : 70

- Instructions :** (1) All questions are compulsory.  
 (2) Q. 5 is of short questions.  
 (3) Each question carries 14 marks.

1. (a) In the system C of complex numbers define convergence of sequence. 7

Prove that  $\left(\frac{\bar{z}_1}{z_2}\right) = \frac{\bar{z}_1}{z_2}$ ,  $z_2 \neq 0$ , for  $z_1, z_2 \in C$ . Obtain the roots of the equation

$$z^4 - z^3 + z^2 - z + 1 = 0.$$

**OR**

Define trigonometric and hyperbolic functions for the complex variable. Show that  $|\sin z|^2 + |\cos z|^2 = \cosh^2 y$ ;  $z \in C$ . Also, express  $\sqrt{3} - i$  in the exponential form.

- (b) State and prove the De Moivre's theorem for the complex numbers. Find all the

values of  $\left(\frac{1}{2} + i\frac{\sqrt{3}}{2}\right)^{\frac{3}{4}}$ .

7

**OR**

Define convergence of the series of complex numbers. Suppose that  $z_n = x_n + iy_n$

( $n = 1, 2, \dots$ ) and  $S = X + iY$ , then prove that  $\sum_{n=1}^{\infty} z_n = S$  if and only if  $\sum_{n=1}^{\infty} x_n = X$

and  $\sum_{n=1}^{\infty} y_n = Y$ .

2. (a) Define : Harmonic conjugate of a function, Entire function. If  $f(z) = u(x, y) + iv(x, y)$  is analytic in a domain  $D$  with non-zero constant modulus, then prove that the function  $f$  is constant. 7

**OR**

If  $f(z) = u(x, y) + iv(x, y)$ ;  $z = x + iy$  and  $z_0 = x_0 + iy_0$  and  $w_0 = u_0 + iv_0$ , then prove that  $\lim_{z \rightarrow z_0} f(z) = w_0 \Leftrightarrow \lim_{(x,y) \rightarrow (x_0, y_0)} u(x, y) = u_0$  and  $\lim_{(x,y) \rightarrow (x_0, y_0)} v(x, y) = v_0$ .

- (b) State Cauchy-Riemann equations in the polar form and verify the same for the function  $z^n$ . Find the harmonic conjugate of the function  $x^3 - 3xy^2 + 2x$  and obtain the corresponding analytic function terms of  $z$ . 7

**OR**

The function  $f$  is defined as  $f(z) = \frac{(\bar{z})^2}{z}$ ;  $z \neq 0$  and  $f(z) = 0$ ;  $z = 0$ , the show that  $f(z)$  is not analytic at  $z = 0$ ; even if it satisfies Cauchy-Riemann equations at the origin.

3. (a) Define : Linear transformation, Bilinear transformation and Conformal mapping. Prove : An analytic function  $f(z)$  is conformal at  $z_0$  if and only if  $f'(z_0) \neq 0$ . 7

**OR**

If  $\alpha, \beta$  are fixed points of a bilinear transformation  $w = f(z)$ , then prove that  $\frac{w - \alpha}{w - \beta} = \lambda \frac{z - \alpha}{z - \beta}$ ; where  $\lambda$  is a complex constant. Find the fixed points of

$$w = \frac{z - 1}{z + 1}.$$

- (b) Obtain the images of the curves  $y = x - 1$  and  $y = 0$  under the mapping  $w = \frac{1}{z}$ ,  $z \neq 0$  also, examine conformality of the mapping at  $z = 1$ . 7

**OR**

Find the critical points of the mapping  $w = 2z^3 - 15z^2 + 36z + 7$  and find its angle of rotation at the point  $1 - i$ . Obtain in image of  $|z - i| < 3$  under the mapping  $w = \frac{iz + 1}{2i + z}$ .

4. (a) Prove : If  $f(x)$  is Riemann integrable in  $(-\pi, \pi)$ , then the series  $\sum_{n=1}^{\infty} (a_n^2 + b_n^2)$  converges, where  $a_n$  and  $b_n$  are the Fourier coefficients of  $f(x)$ . 7

**OR**

Define the Fourier series for the function  $f$  and obtain the same for the function

$$f(x) = x \sin x, \text{ hence deduce that } \frac{\pi}{4} = \frac{1}{2} + \frac{1}{1 \cdot 3} - \frac{1}{3 \cdot 5} + \frac{1}{5 \cdot 7} - \dots$$

- (b) Find the Fourier series expansion of the function  $f(x) = x - x^2$  in  $[-\pi, \pi]$ . 7

**OR**

Obtain the Fourier series for the function  $f(x) = x^2$  in  $(0, 2\pi)$ .

5. Attempt any **seven** : 14

- (i) For the complex number  $z = -1 - i$ , find the principal argument  $\text{Arg}(z)$ .
- (ii) Find the real and imaginary parts of the function  $\frac{\bar{z}}{z}$  where,  $z = a + ib \neq 0$ .
- (iii) State the C-R equations and the derivative of the function  $f(z) = u + iv$  in Cartesian form.
- (iv) Simplify  $\log\left(\frac{\sqrt{3}}{2} + i\frac{1}{2}\right)$ , also write it in a polar form.
- (v) Find the singular points of  $\frac{z^2 + 1}{(z - 1)(z^2 - 7z + 12)}$  and  $|z|^2$ .
- (vi) Obtain  $\int_{-\pi}^{\pi} \sin mx \cos nx \, dx$  for all  $m, n = 0, 1, 2, \dots$
- (vii) Find  $\int_{-\pi}^{\pi} \cos^2 nx \, dx$ .
- (viii) Is the function  $f(z) = (\bar{z})^2$  analytic ? Justify.
- (ix) State the Bessel's inequality.
-
